Canadian Society of Echocardiography

17TH ANNUAL CANADIAN ECHO WEEKEND
APRIL 23-25, 2015
TORONTO, ON

Session Title: Great Cases and Conundrums from Across the Country

Presenter/Author: Colleen Londry

OBJECTIVES: What questions or points will participants learn or discuss?

1. **An unexpected finding – the need for modified views and added views.**
2. **Necessity of Doppler – and knowing spectrals and timing of waves.**
3. **After tests, required to make diagnosis.**

DISCUSSION: Please provide a summary of the discussion and/or include 3 to 6 key presentation slides.

I am going to present an interesting case that demonstrates the unusual pathologies that show up unexpectedly on a routine echo. Show the need to expand a study to provide as much information as possible using off angle and modified views.

Demonstrate the responsibility of the scanner to know and show all 2D, Doppler or measurements required. I will give the students clinical info, echo images, argue and surgical results – followed by the outcome.

CONCLUSIONS:

1.

2.

3.
